IQuEra

Session II:
Dynamics & SDK Demo

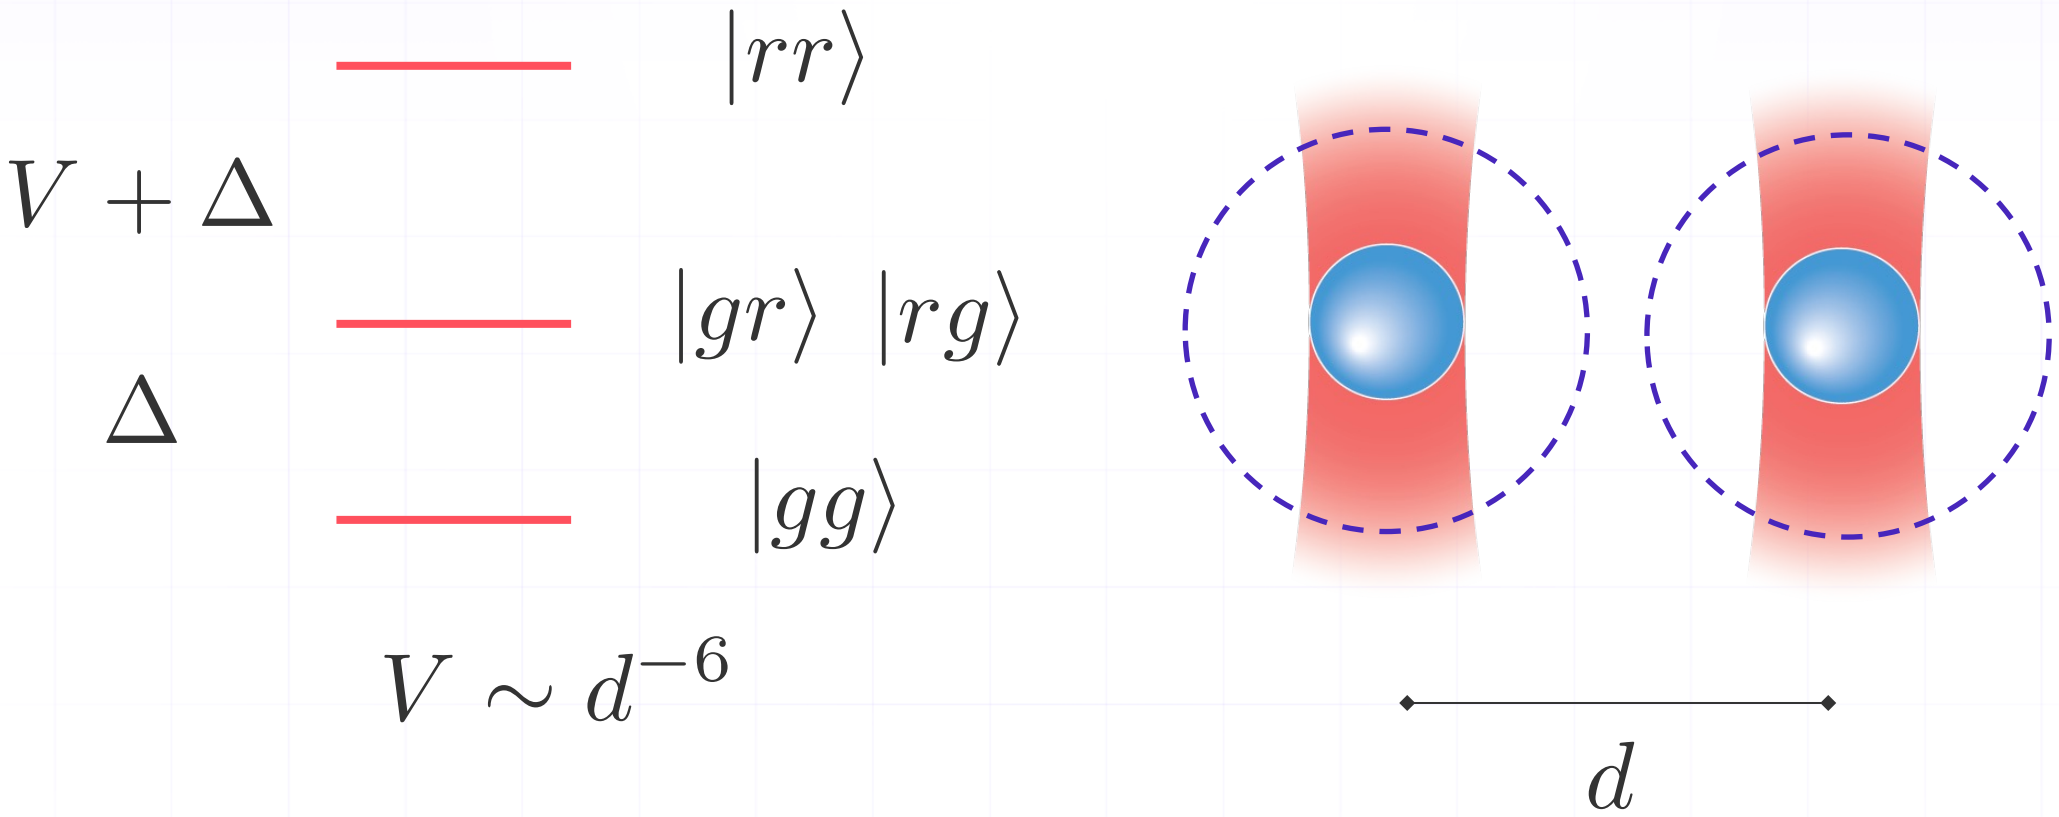
Learning objectives

By the end of the session, you will be able to:

- **Describe** the Rydberg blockade **phenomenon**
- **Compute** the **dynamics** of multi-qubit Rydberg systems **describing** the effects of the **blockade** on **Rabi** oscillations
- **Analyze** Rydberg phases on square lattices

Educational Repo

Rydberg blockade: phenomenology

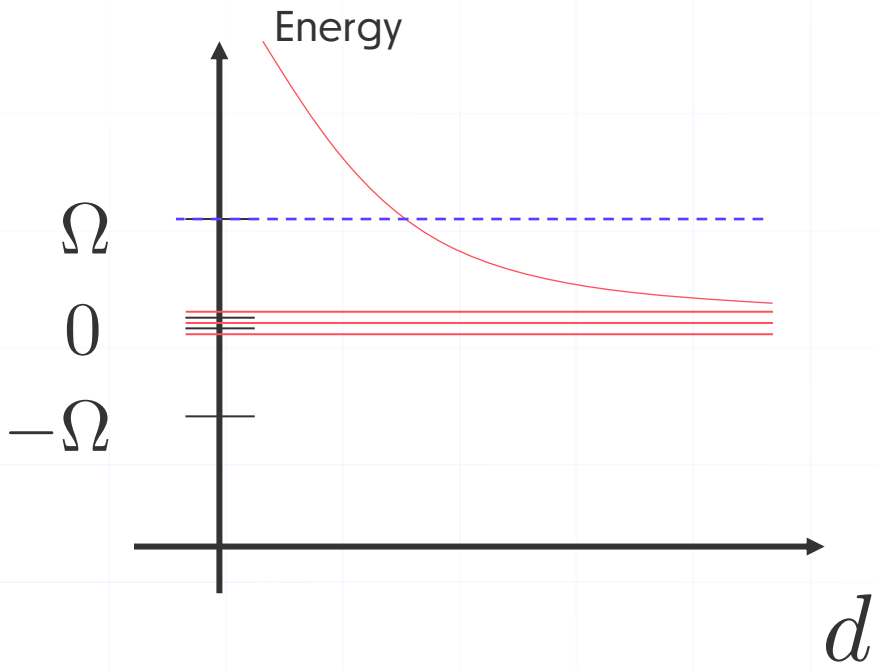


Rydberg blockade paradigm

$$H_{12} = \frac{\Omega}{2}(|g_1\rangle\langle r_1| + |g_2\rangle\langle r_2| + H.c.) + V_{12} n_1 n_2 \qquad V_{12} = \frac{C_6}{d^6}$$

$$= \begin{bmatrix} 0 & \frac{\Omega}{2} & \frac{\Omega}{2} & 0 \\ \frac{\Omega}{2} & 0 & 0 & \frac{\Omega}{2} \\ \frac{\Omega}{2} & 0 & 0 & \frac{\Omega}{2} \\ 0 & \frac{\Omega}{2} & \frac{\Omega}{2} & V_{12} \end{bmatrix}$$

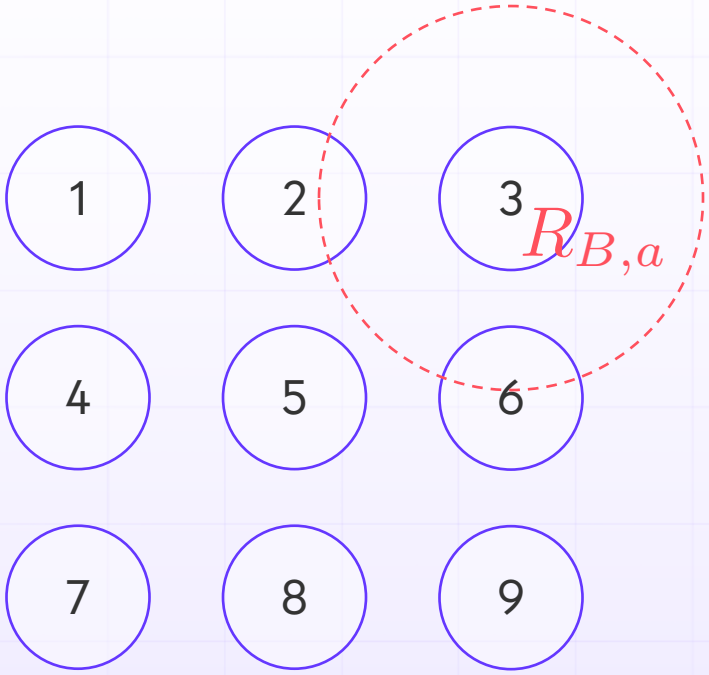
$$R_b = (C_6/\Omega)^{1/6}$$



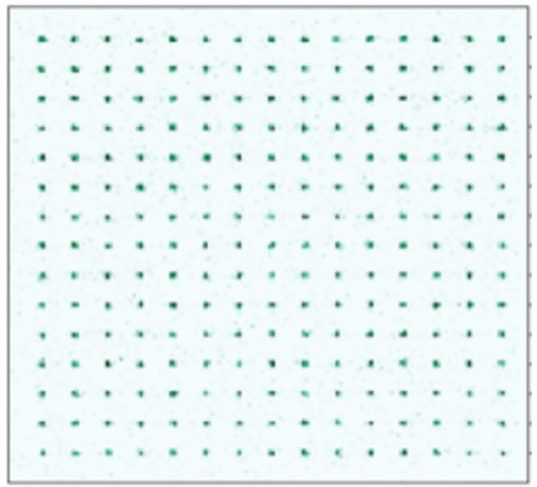
Oscillations/superposition stuck in manifold: $|gg\rangle,\ |gr\rangle,\ |rg\rangle$

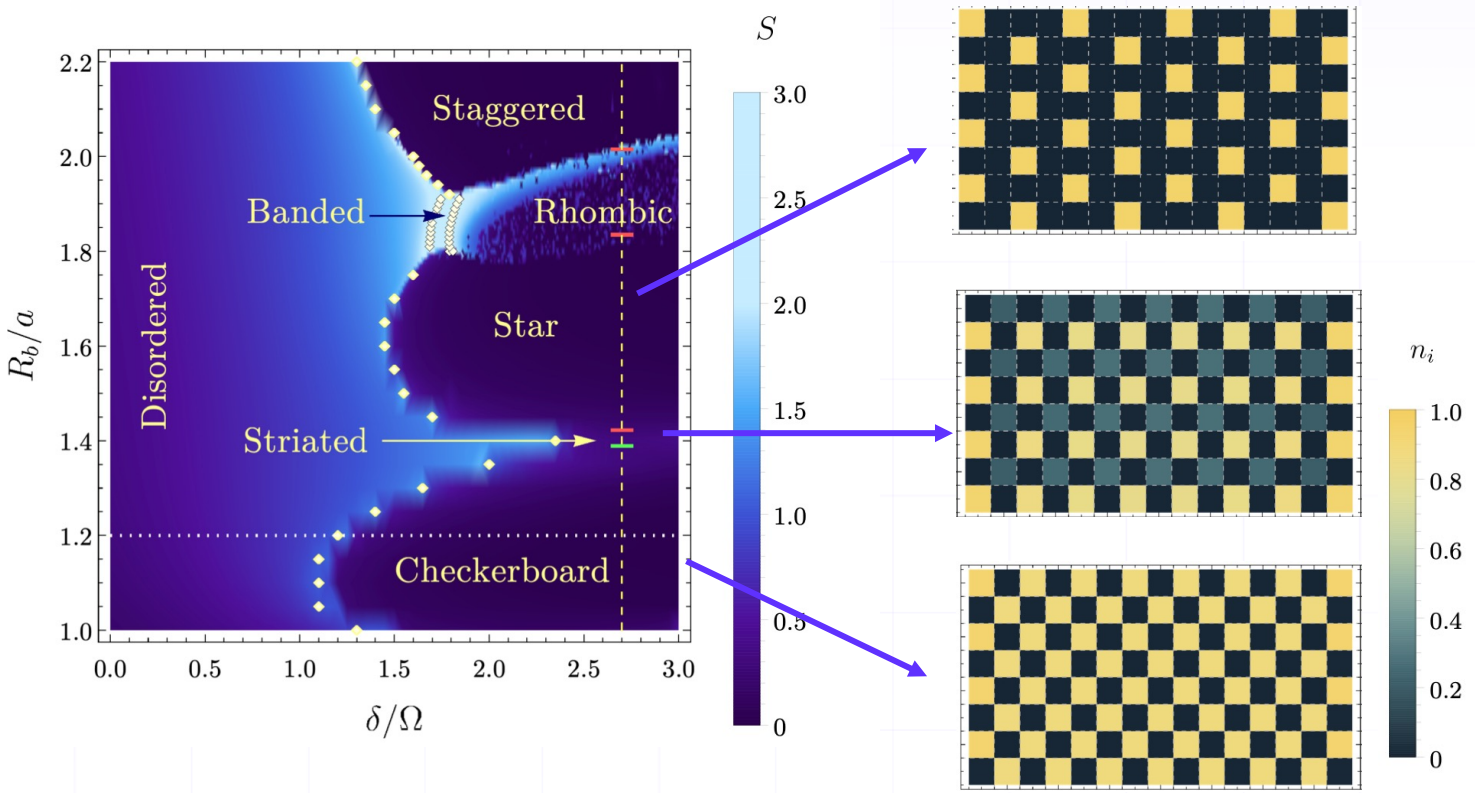
When many qubits come together

Activity: Find excitation patterns



(Ordered) Quantum phases





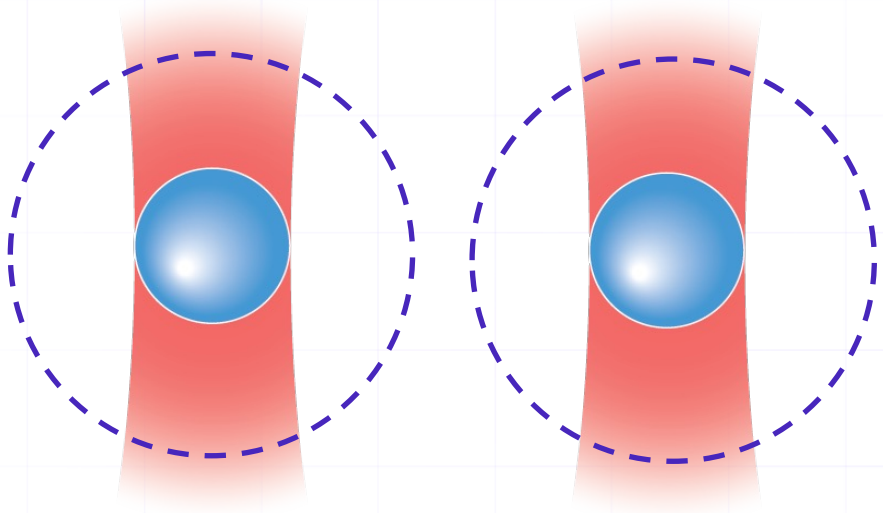
R. Samajdar et al., Phys. Rev. Lett. 124, 103601 (2020)

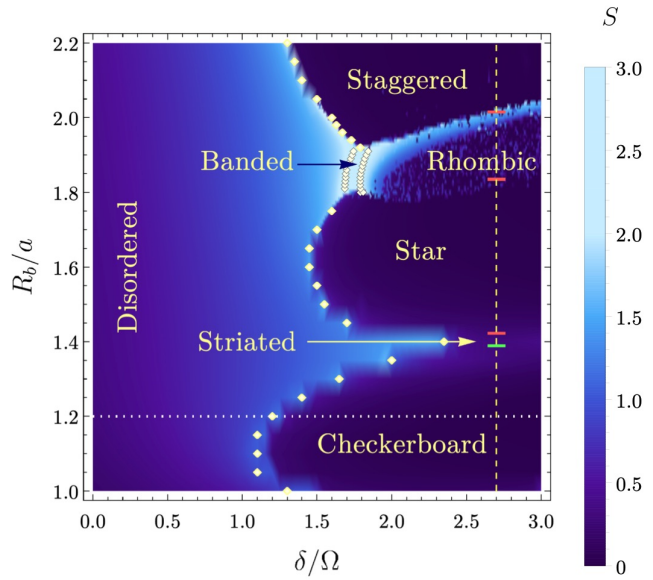
Summary

Algorithm design

$$\frac{H}{\hbar} = \sum_i \frac{\Omega(t)}{2}\left(e^{i\phi(t)}|g_i\rangle\langle r_i| + e^{-i\phi(t)}|r_i\rangle\langle g_i|\right) - \sum_i \Delta_i(t) n_i + \sum_{i<j} V_{ij} n_i n_j$$

Rydberg blockade & quantum phases





Today's story (LO's)

Now you are able to:

- **Describe** the Rydberg blockade **phenomenon**
- **Compute** the **dynamics** of multi-qubit Rydberg systems **describing** the effects of the **blockade** on **Rabi** oscillations
- **Analyze** Rydberg phases on square lattices

SDK Showcase

BLOQADE

pkg> add Bloqade

julia

pip install Bloqade

Newcomer! Alpha release

WOLFRAM
